INTRODUCTION

- ❑ Advance key logger is a type of technology used to monitor and record each keystroke on a specific computer.
- ❑ It also known as keystroke loggers, may be defined as the recording of the key pressed on a system and saved it to a file, and the that file is accessed by the person using this malware.
- ❑ Key logger can be software or can be hardware.

PROBLEM STATEMENT

- ❑ While the continuous development of technology has allowed cybercriminals to monitor our online activity in new and advanced ways.
- ❑ The main purpose of these project is to monitor user activity and read anything a victim is typing into their keyboard.
- ❑ Here we trying to create a tool that hackers use to monitor and record the keystrokes user make on your keyboard.

OBJECTIVES

- ❑ This project's major goal is to help administrators and IT Security personnel ensure that they are immediately aware of any Dangerous.
- ❑ Key loggers are most frequently used to collect passwords and other sensitive data. We will be focusing on software based key loggers.
- ❑ Key loggers are a tool that was created primarily due to the fact that antivirus software rarely recognizes them as potentially harmful programs.

WATERFALL MODEL

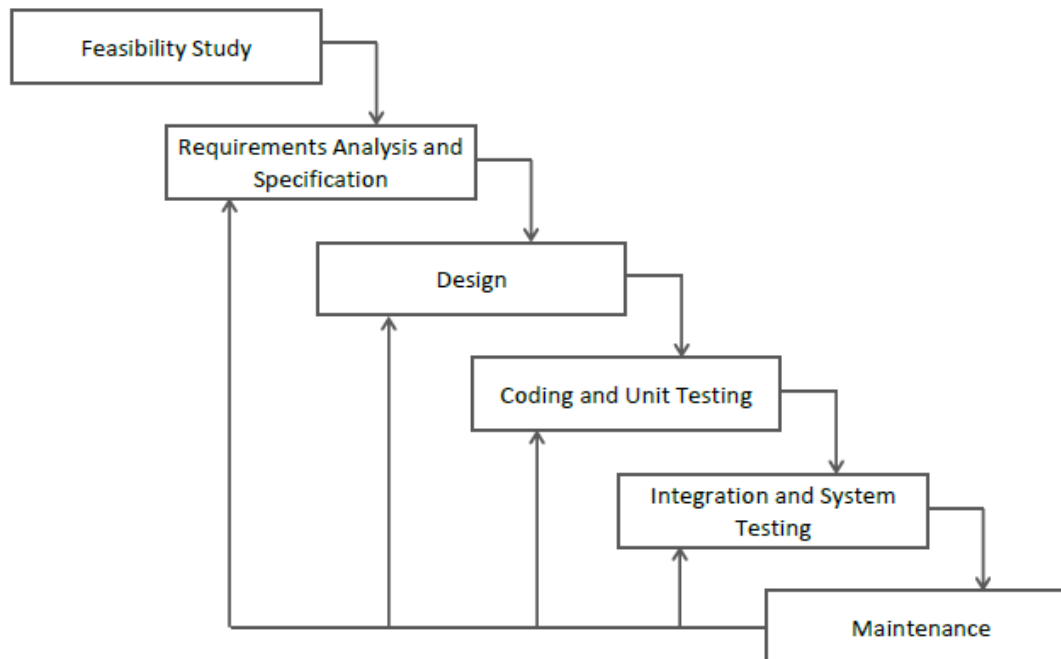

Figure 2: Iterative Waterfall Model

PROJECT REQUIREMENTS

☐ Python 3.10. 7 

☐ Pycharm 

☐ Outlook(for mail) 

☐ Auto py to exe 

SOFTWARE REQUIREMENTS

✓For the development process:

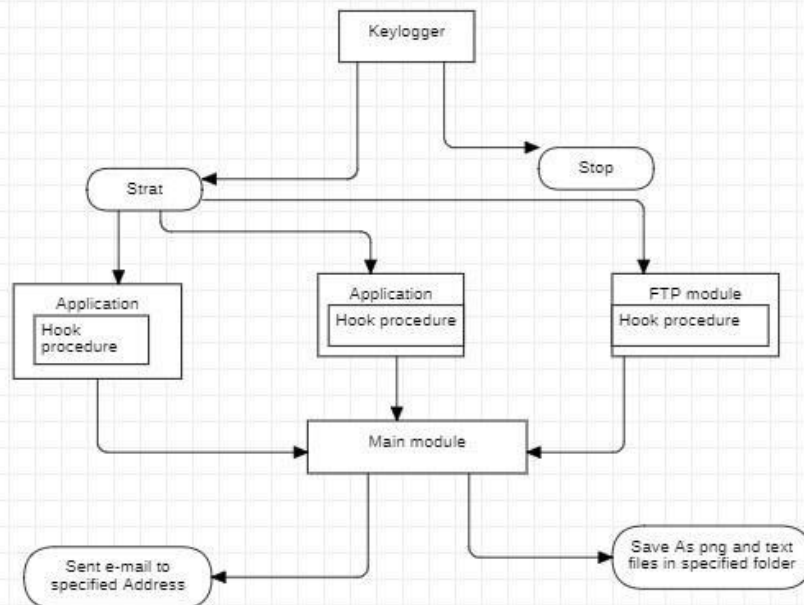

Recommended:

- ❖ Intel i5 or AMD Ryzen 5 and above
- ❖ 4 GB RAM
- ❖ 10 GB of free space
- ❖ Good internet connection

Minimum:

- ❖ Intel i3 or AMD Ryzen 3 and above
- ❖ 4 GB RAM
- ❖ 5 GB of unoccupied space
- ❖ Good internet connection

Snapshot

Mail sent

FUTURE SCOPE

- The application can be further extended to add certain extra features like
 - ❑ Mouse clicks
 - ❑ Webcam Capture
 - ❑ Audio capture (Microphone)
 - ❑ Undetectable by the anti-virus

LIMITATIONS

- ❑ Someone can use it for illegal purposes.
- ❑ Sometimes it can be detected by the antivirus and it's got blocked.
- ❑ It can be a bit hard to install it on such a user's machine who is a bit aware of that malicious software.

CONCLUSION

- As there are always two side of a coin. just like this key logger has good as well as bad reputation. Thus using this technology of Monitoring & working by a key logger it becomes easy for the user to have a watch on his system whatever activates going on the system.
